As of July 2015
Dear Colleagues,

Microsurgical and minimally invasive techniques have gained increased importance in spinal surgery in the last years. They have become the gold standard in the treatment of a variety of pathologies of the spine and represent the ongoing evolution of surgical techniques towards more tissue-sparing approaches.

The more sophisticated a technique, the more important training and education becomes. Our past international micro-surgical wet labs, a joint venture of Schoen-Clinic Munich-Harlaching and the Department of Anatomy of the Ludwig-Maximilians-University, were great successes and have encouraged us to proceed with this teaching concept.

We proudly announce the 19th Spine Advanced Microsurgery Course Munich 2015, a hands-on cadaver course on microsurgical and minimally invasive techniques of the anterior and posterior cervical spine. Surgical Techniques towards more tissue-sparing approaches.

It would be a pleasure for us, the faculty and the organizers, to welcome you in Munich in September/October 2015!

H. Michael Mayer        Andreas Korge
